Summary

Software developer with **1.5 years** shipping production **React Native**, **Next.js** and **applied-AI** products, including a RAG video agent that has captured **220+ qualified leads**. Turns messy, real-world problems into reliable products by owning features end to end and measuring their impact. Aims to bring that product-minded engineering to teams building **AI-first** mobile and web experiences.

Experience

Software Developer Jul 2025 – Oct 2026

SolarioTech *Mohali, Punjab*

- Promoted to a permanent Software Developer role within **6 months** of joining as an intern; delivered **5+ client web and mobile products** and a full company-site rebuild, all scoring **93–100 Lighthouse** and **100 SEO**.

Daisy | *Conversational AI Agent* Next.js, GPT-4o, Pinecone, HeyGen, ElevenLabs

- Built **Daisy**, a conversational **AI agent** pairing a **HeyGen** video avatar and **ElevenLabs** voice over **GPT-4o**.
- Engineered the **RAG** layer, embedding client content in **Pinecone** so answers come from verified material.
- Replaced a client site's static intake form with a guided conversation that qualifies visitors, books meetings through **Calendly**, and logs each lead to the **CRM** automatically, capturing **220+ qualified leads** to date.

LittleBirdi | *Cross-Platform Mobile App* React Native, Google Maps, TanStack Query, Firebase

- Building **LittleBirdi**, a map-first discovery app ranked by a proprietary **Little Birdi Score**, as one of **two React Native developers** on a four-person team; own the app UI, **auth module** and APIs, the **Social Buzz** feed and **Google Maps** search.
- Built a two-currency **gamified rewards** system (status tiers that unlock soft-opening and VIP access, plus points redeemable for gift cards) and **venue-side tools** that let businesses fund campaigns and host community events.
- Optimized cold start to **236 ms** (**67% faster**) and reduced API response times by **47%**, measured in **Firebase Performance**, by memoizing styles and callbacks, reworking list rendering, and migrating server state from Redux to **TanStack Query**.

Court Doc Pro | *AI Behavioral-Documentation Platform* Next.js, React Native, LLM/AI

- Built the web platform and companion app for **Court Doc Pro**, solving a core problem in high-conflict co-parenting: isolated incidents scattered across months of messages and screenshots get dismissed as one-offs. The **AI-enhanced** product connects them into one structured, cumulative record that surfaces **recurring behavioral patterns** and their impact over time.
- Implemented a four-step logging flow across **9 behavioral categories** with pattern-frequency tracking and auto-generated **summary reports** (timeline, category breakdowns, graphs) for family-court use, bringing a documentation process that otherwise costs **$8K–$25K** and **20–60 hours** of specialist work within reach of any parent.

Internal Automation | *Ops Tooling* n8n, agentic workflows

- Automated internal operations in **n8n**, cutting new-hire onboarding (credentials, access, devices, documents) from **2–3 hours** to **about 5 minutes**; the same **agentic workflows** also run offboarding, task assignment and inventory tracking.

Technical Skills

Languages: JavaScript, TypeScript
Mobile: React Native (Expo and bare CLI)
Release: EAS Build, Google Play Console, App Store Connect
Web: React.js, Next.js, Tailwind CSS, shadcn/ui, Aceternity UI, Magic UI, Framer Motion
State & APIs: TanStack Query, Redux, REST APIs, Next.js API routes
AI & Automation: RAG, Pinecone, agentic workflows, n8n, MCP servers, prompt orchestration, ElevenLabs, HeyGen
Tools: Git, GitHub, Postman, Vercel, Chrome DevTools, Lighthouse, Claude Code, Codex, Antigravity

Education

BRCM College of Engineering and Technology Bhiwani, India

*Bachelor of Technology in Computer Science, **8.2 GPA*** *Aug. 2021 – May 2025*

Certifications & Achievements

- **Meta Certified Front-End Developer** — Coursera, Jul 2023.
- Placed **4th** in the **Empower Hackathon** organized by IDEOS, **IIM Ahmedabad**.
